2.1.9.	Templates.....	10
2.1.10.	JS changes.....	14
2.1.11.	Responsive changes	14
2.1.12.	Vendor bundles + config.....	14
2.1.13.	Overridden vendor services.....	14
2.2.	Translations	14
2.2.1.	Textmodules.....	14
2.2.2.	Symfony Translations	15
2.3.	Topic specific (not complex) changes in silver.e-shop	15
2.4.	silver.orderhistory	15
2.5.	silver.customercenter	15
2.6.	Hotfixes	15

1. es-brand version 1.4.1

The version 1.4.1 supports the eZ Platform Version V2.4 containing the new pagebuilder

- supported eZ Platform Version V2.4

If you apply this eZ Commerce version in the project, always check the latest tagged version.

1.1. Server requirements

eZ Commerce relies on eZ Platform software that is built to rely on existing technologies and standards, mainly:

- PHP scripting language: 7.1
- SQL database: *MySql/MariaDB or PostgreSQL*
- Web Server: Apache/Nginx
- Java JRE (Oracle-Sun/OpenJDK) when Solr is used (for use with eZ Find search engine)

1.2. New features and improvements

List of new features and improvements.

Ticket	Topic	Description
#16478	PageBuilder	New pagebuilder has been adapted to eZ Commerce A new search component has been introduced for the pagebuilder block "product slider" New Templates and configuration for zones and embed templates for products, events and blog posts
#16382	Richtext field	Custom Tag product slider Allows to embed a product slider inside a richtext offering 2 designs
#16287	Product	eZ Commerce offers a possibility to upload and offer a pdf download for products
#15825	installer	Installer for eZ Commerce
#16201	No subfolder for assets	Change the default configuration for asset folders to 0
#16194	Toggle price button	Design improvement and a better spot
#16196	Toggle price button (Advanced version only)	Stock in product detail not hidden anymore by toggle feature

#16026	Contact form	GDPR adaptation: Add textmodule for privacy policy in contact form
#13423	New Dropdownmenu Component	Can be used instead of Megamenu Component
#16014	Exchanged Cloudzoom plugin with xZoom plugin	xZoom plugin is open source xZoom documentation
#16229	GDPR e-mail encryption	Added parameter for mail encryption
#16519	Password Reminder	Template improvements
#16228	Checkout	Adapt GDPR textmodules and checkboxes
#16197	Forms validation	Make ZIP validator more flexibly usable
#16193	Log search requests	Due to the GDPR regulations the user id will be not stored any more in search logs. New parameter siso_core.default.gdpr.store_user_id_for_search: false
#16608	Checkout design	Remove grey outline in checkout steps
#16766	Specification fieldtype	sessspecification fieldtype supports 3 data fields
#16198	BasketLine API change	Typo in name of method remoteFromRemoteDataMap in class EshopBundle\Entity\BasketLine
#16140	Orderhistory	orderhistory_view policy check for orderhistory usage added
#15313	Template Resolver	Template Resolver deactivated by default configuration
#16819	ERP default configuration (Advanced version only)	select_contact_mode disabled in standard
#16520	Template extensions	Support simple fields in ses_render_field
#16760	New Form syntax	Adjust form syntax for Symfony 3
#16772	Legacy	Removal of all eZ Publish legacy code and references

#16973	User configuration and fields	Provide separate user groups for business and private customer and add first and last name fields to eZ User content type.
#17006	Registration	Private customer registration was enhanced by the possibility to send the activation email to the shop admin instead of the customer and to inform the customer via email when the shop account was activated via activation link in email.

1.3. Bug fixes

List of bugs that were fixed in this version.

Ticket	Topic	Description
#16410	Registration	Registration form broken - privacy policies checkbox
#16376	configuration	Issue with configuration settings The option RemotePrice provider has been offered in eZ Commerce as well which is not correct
#16004	mobile view Wishlist	Improved quantity field for tablets
#16443	Quickorder delete lines	Only add the line if the delete checkbox was not checked
#16206	Serializing of catalogElement	Issue with toHash() fromHash() method in the PriceField
#16767	PHP7	Fix PHP7 compatibility
#16194	Price Toggle Button (Advanced version only)	Toggle bestseller prices
#16755	Order History	Fix strict errors about wrong type hinting.
#16208	Business user VAT number (Advanced version only)	VAT number is only required for EU countries
#16205	Templates	Remove redundant template code
#16286	Tabs in backend	Don't show eCommerce tab in non-related content types.
#16866	eZ Backend	Bug in ContentModificationSlot for move subtree
#16207	TranslationService	- The siteaccess is almost ignored in a specific situation. - No fallback language will be used if a siteaccess is defined.
#16878	Delegate	Strict comparison for templates
#16903	Quick order	Fix session management for CSV upload

#17099	Assetservice	Default strategy set to "dataprovider" since "merge" could cause performance issues
#16962	Registration	Make registration link eZ Commerce aware
#16867	Econtent	Econtent mapping corresponds to new data model
#16651	CustomerProfileData	profileData in EzErpCustomerProfileDataService was not updated by UpdateCustomerProfileDataProcessor
#16781	Improvements for econtent	<p>optimised SwitchDataProviderCommand and updated to eZ Platform 2.4</p> <p>EcontentCatalogFactory.php</p> <ul style="list-style-type: none"> - Fixed issue with php 7.2 - adapted mapping for float fields - fixed issue in case no image field is provided by econtent <p>EcontentFieldNameResolver.php – Added support for larger variant sets (solr length issue)</p> <p>StorageService.php – Fixed issue if finder does not find assets</p> <p>Econtent configuration - added example config for catalog segmentation</p>
#17210	Address management	Fix Exception in StoreDeliveryAddressWithoutErpConnectionListener

1.4. New plugins

no change

1.5. Tagged versions

1.5.1. silver.eShop

Ticket	Topic	Description	Date	Tag	Patch
#12345	Example	fixed a bug	23-02-15	3.1-1234	EZP-27011-solr-index-location-change.patch

1.5.2. silver.customercenter

Ticket	Topic	Description	Date	Tag	Patch
#12345	Example	fixed a bug	23-02-15	3.1-1234	EZP-27011-solr-index-location-change.patch

1.5.3. silver.orderhistory

Ticket	Topic	Description	Date	Tag	Patch
#12345	Example	fixed a bug	23-02-15	3.1-1234	EZP-27011-solr-index-location-change.patch

1.6. JavaScript libraries and plugins

no change

2. API Changes

2.1. Silver.eShop

2.1.1. Database changes

Update doctrine

```
php ezpublish/console doctrine:schema:update --force
```

- document custom queries that need to be executed manually (e.g. migrate old data structure to the new schema)
- document manual changes in tables

2.1.2. Configuration

- document modified configuration settings in e-shop
- document all parameters, that are ignored by git (parameters.yml), but need to be added/modified in the project

Code Block 1 New configurations

```
# config parameter to define the used admin siteaccess for links to eZ
backend
siso_core.default.related_admin_site_access: 'admin'
# optional parameter to send user activation email after private customer
registration to shop admin for validation instead of sending it to the
customer
siso_core.default.user_activation_receiver: xx@yyy.com
# parameter to activate information email to customer after successful
activation of shop account via activation link in email
siso_core.default.info_email_after_user_activation: true/false
```

To separate business and private user in one installation two user groups in the user group 'Shopuser' are used. Next to the user groups a configuration is needed:

```
siso_core.default.user_group_location.business: 385
siso_core.default.user_group_location.private: 388
```

2.1.3. Classes

- **move/rename the class**

- document every change in the namespace - document the **old** file name and the **new** file name

- **constants**

- document every change in the constants (constant name or value) - document the **old** constant name and the **new** constant name

- **changed attributes**

- document the class name
- document **old** and **new** attribute name (in the project the old name must be replaced with new one - in every place)
- add some examples, how to change it:

Code Block 2 TODO - TO BE REMOVED

```
- @property-read float $vatCode
+ @property-read float $vatPercent
```

Code Block 3 TODO: TO BE REMOVED

```
# example how to use it
return new PriceField(
    array(
        'price' => $this->priceFactoryService->createPrice(
            array(
                'price' => (float)$dataMap[$fieldIdentifier]-
            >text,
                'isVatPrice' => true,
                'source' => 'eZ',
                'vatCode' => 19.00
            +                'vatPercent' => 19.00
        )
    )
);
```

- **new attributes**

- document, that in the project there is a need to check, if the model was overridden and if so, new attribute must be added
- document the class name
- document the new attribute name
- document all places where the attribute must be added (e.g. configuration)

The property **vatCountryCode** has been removed from model \Siversolutions\Bundle\EshopBundle\Entities\Forms\RegisterBusiness

and it's respective service implementation \Silersolutions\Bundle\EshopBundle\Entities\Forms\Types\RegisterBusinessType
See templates section for necessary changes.

2.1.4. Services

- document any constructor changes
- document configuration changes for this service
- document changes in service id

2.1.5. Method signature changes

- document all signature changes
- add examples

Code Block 4 TODO: TO BE REMOVED

```
- protected function extractPrice($fieldIdentifier, $dataMap)
+ protected function extractPrice($fieldIdentifier, $dataMap, $vatCode =
  null, $vatPercent = null)
```

2.1.6. Interface changes

- document every change of add/remove/update of method in the interface

2.1.7. Deprecated content

- document deprecated methods/attributes/classes...
- document alternative to these deprecated content
- document how to use the alternative instead of the old code (maybe link to the existing documentation, if it exists)
- or document if there is no alternative and the deprecated content will not be supported anymore!

2.1.8. Ez legacy changes and files/settings ignored by .git

Some changes in eZ Commerce require changing of the legacy settings. Sometimes you need to activate an extension, or adapt your custom project settings.

- All these steps needs to be documented.
- *Example:* silver.e-shop will restrict the zones to only one in standard. Project needs more of them. It has be documented how to enable more zones again.

2.1.9. Templates

- document paths to removed templates
- document paths to changed templates

- diff for the changes templates will be created on the end

Modified templates

- The templates

SilversolutionsEshopBundle:Emails:password_reminder.html.twig and SilversolutionsEshopBundle:Emails:password_reminder.txt.twig do not get the receivers e-mail address anymore, but the full name in the template parameter contactMailReceiver.

            </div>
-                                     <div class="small-6 large-12 columns">
+                                     <div class="small-6 medium-2 large-12 columns">
            {% if product.minOrderQuantity|default is not empty and
product.minOrderQuantity != 0 %}
            {% set minQuantity = product.minOrderQuantity %}
            {% else %}

```

2.1.10. JS changes

- document all .js changes

2.1.11. Responsive changes

Breakpoints are changed in this version to have a better experience on all the different devices

- medium breakpoint changed from "\$medium-breakpoint: em-calc(1052);" to \$medium-breakpoint: em-calc(850); in "src/Silversolutions/Bundle/EshopBundle/Resources/public/scss/settings/_foundation.scss"
- Menu icon bar grid changed from "\$icon-bar-wrapper-column-width: 5 !default;" to "\$icon-bar-wrapper-column-width: 6 !default;" in "src/Silversolutions/Bundle/EshopBundle/Resources/public/scss/storm/_extend.components.icon-bar.scss"

2.1.12. Vendor bundles + config

If silver.e-shop requires some vendor bundles (solr, paypal...), document how to:

- install them
- enable them
- configure them

2.1.13. Overridden vendor services

If silver.e-shop overrides some standard services (from eZ or Symfony), this has to be documented!

2.2. Translations

2.2.1. Textmodules

- Document all new textmodules
- New:
 - label.accept_cancellation_policies
 - data_privacy_hint
- Removed:
 - label.accept_data_protection_and_cancellation_policies

2.2.2. Symfony Translations

New:

- subject.registration_validation

- subject.complete_registration
- link.activate_user
- link.edit_user
- label.user_name
- mail_text.new_private_user_registration

Topic specific (not complex) changes in silver.e-shop

no change

2.3. Topic specific (not complex) changes in silver.e-shop

- document all changes that belong to one topic here
-

2.4. silver.orderhistory

Follow these changes only, if you are using Orderhistory in your project.

- Check the API changes structure from above
-

2.5. silver.customercenter

Follow these changes only, if you are using Customercenter in your project.

- Check the API changes structure from above
-

2.6. Hotfixes

To check the API changes for the hotfixes, please check the hotfix patches above!
